

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listing, of claims in the application:

Listing of Claims:

1. **(Cancelled)**

2 2. **(Currently Amended)** An openable screen element unit according to claim-~~1~~ 8,
wherein the ~~two~~-first and second planar sections are placed in two planes with a mutual angle of
approximately 15°.

2 3. **(Currently Amended)** An openable screen element unit according to claim-~~1~~ 8,
wherein the screen element is provided with a rebate along at least a side end and a top end, said
rebate having a complementary cross section shape in relation to ~~the~~-a cross section of the fame
4 structure.

2 4. **(Currently Amended)** An openable screen element unit according to claim-~~1~~ 8,
wherein the ~~two~~-first and second planar sections have two planes that are both different from a
plane of a wall opening.

2 5. **(Currently Amended)** An openable screen element unit according to claim ~~1~~ 8,
wherein the first planar section has a plane parallel with a wall plane and the second planar
section has a plane differing therefrom.

6. **(Cancelled)**

2 7. **(Currently Amended)** An openable screen element unit according to claim-~~6~~ 8,
wherein the two screen elements open toward a single direction.

2 8. **(Currently Amended)** An openable screen element unit in a building structure for
insertion in an opening of a wall in said building structure, said screen element unit comprising
at least one screen element side-hinged to a frame structure, said screen element being pivotally
4 mounted over a hinge axis in the frame structure for opening and closing in a direction away
from the ~~opening,~~opening;

6 wherein the screen element comprises first and second planar sections, said first and
second planar sections being mutually angled and arranged in different planes with an
8 intersection line substantially parallel to the hinge axis;

10 wherein said first planar section has a first visible surface providing a first appearance
and said second planar section has a second visible surface providing a second appearance
visually distinguishable from the first appearance when said screen element is integrated into the
12 wall;

14 wherein the ~~two~~first and second planar sections are placed in two planes with a mutual
angle of 10° to 20°; and

16 wherein the screen element unit comprises two screen elements side-hinged on either side
of the frame structure and wherein the two screen elements have opposite opening directions.

9. **(Currently Amended)** An openable screen element unit according to claim~~1~~8,
2 further comprising lighting means arranged on one of ~~the~~a group comprising the screen element
unit and the frame structure.

10. **(Currently Amended)** An openable screen element unit according to claim~~1~~8,
2 wherein the screen element is a fire door.

11. **(Previously Presented)** A screen element according to claim 10, wherein the screen
2 element of the fire door has a space between two outer surfaces;
wherein automatic door closing means are arranged in connection with a side hinge.

12. **(Currently Amended)** A screen element according to claim~~1~~8, wherein said first
2 planar section is wider than the second planer section which is provided with locking means.

13. **(Currently Amended)** An openable screen element unit according to claim~~1~~8,
2 wherein the screen element is a door.

14. (Cancelled)

15. **(Currently Amended)** An openable screen element unit according to claim~~1~~8,
2 wherein the screen element is rectangular in shape.

16. (**Previously Presented**) An openable screen element unit according to claim 9,
2 further comprising:
sensor means for activating the lighting means.

17. (**Currently Amended**) An openable screen element unit according to claim-1_8,
2 wherein the first planar section has a plane coincident with a wall plane and the second planar
section has a plane differing therefrom.

18. (**Cancelled**)

19. (**Currently Amended**) An openable screen element unit according to claim 8,
2 wherein said first planar section has a first visible surface reflecting light and creating shadows
to produce a said first appearance and said second planar section has a second visible surface
4 reflecting light and creating shadows to produce a said second appearance visually
distinguishable from the first appearance when said screen element is integrated into the wall.

20. (**Cancelled**)

21. (**Previously Presented**) An openable screen element unit according to claim 8,
2 wherein said first planar section has a first visible surface reflecting light and creating shadows
to produce a first shade and said second planar section has a second visible surface reflecting
4 light and creating shadows to produce a second shade visually distinguishable from the first
shade when said screen element is integrated into the wall.

22. (**Currently Amended**) An openable screen element unit according to claim-1_8,
2 wherein said first planar section has an opaque first visible surface providing a said first
appearance and said second planar section has an opaque second visible surface providing a said
4 second appearance visually distinguishable from the first appearance when said screen element is
integrated into the wall.
